

WorkFlow HRMS: Part 1 - Backend Architecture Setup Report

This report details the modular monolithic architecture of the WorkFlow backend and the initial registration of the 12 core HRMS feature modules.

1. Modular Monolithic Architecture (Beginner Friendly)

A Modular Monolith is like a large apartment building with completely independent, self-contained apartments.

* The
own d

2. Directory Structure and Layers

Each of the 12 modules has 4 distinct layers:

1. Do

3. Example Flow: Submitting a Leave Request

```mermaid

seque

Client->>GraphQL: Send submitLeaveRequest mutation

Graph

---

## 4. Why This Architecture is Reliable & Performance-Oriented

\* Low Coupling: Changes are local to the module.

\* Asy

---

## 5. Common Backend Errors and Fixes

\* Error: `circular dependency` between projects:

\* \*Fi
