

WorkFlow Global HRMS - Part 7: Payroll Module

Generated: June 23, 2026

1. Introduction

Part 7 implements the Payroll Module for the WorkFlow Global HRMS system. This module enables employees to view their payslips with detailed breakdowns of earnings and deductions. The implementation supports localized payroll components for different countries (US and India) with region-specific tax calculations and statutory deductions.

2. Architecture Overview

2.1 Module Structure

The Payroll Module follows the established layered architecture:

- PayrollFeature.Domain: Contains PayrollRecord entity and PayrollStatus enum
- PayrollFeature.Application: Business logic, DTOs, and service interfaces
- PayrollFeature.Infrastructure: Repository implementations and DI configuration
- PayrollFeature.GraphQL: Query resolvers for API exposure

2.2 Domain Entity

PayrollRecord Entity:

```
public class PayrollRecord : BaseEntity
{
    public string EmployeeId { get; set; }
    public DateTime PayPeriodStart { get; set; }
    public DateTime PayPeriodEnd { get; set; }
    public decimal BasicPay { get; set; }
    public decimal HRA { get; set; }
    public decimal Allowances { get; set; }
    public decimal GrossPay { get; set; }
    public decimal PF { get; set; }
    public decimal IncomeTax { get; set; }
    public decimal ESI { get; set; }
    public decimal Deductions { get; set; }
    public decimal NetPay { get; set; }
    public PayrollStatus Status { get; set; }
}
```

WorkFlow Global HRMS - Part 7: Payroll Module

3. Backend Implementation

3.1 Repository Layer

IPayrollRepository Interface:

```
public interface IPayrollRepository
{
    Task<IEnumerable<PayrollRecord>> GetEmployeePayslipsAsync(string employeeId);
    Task<PayrollRecord?> GetPayrollByIdAsync(string payslipId);
}
```

The repository provides methods to:

- Retrieve all payslips for an employee ordered by pay period
- Get detailed breakdown of a specific payslip

3.2 Application Layer - Payroll Service

The PayrollService implements core business logic:

```
public interface IPayrollService
{
    Task<IEnumerable<PayrollRecordDto>> GetMyPayslipsAsync(string employeeId);
    Task<PayrollRecordDto?> GetPayrollDetailAsync(string payslipId);
}
```

Key Methods:

- GetMyPayslipsAsync: Returns all payslips for an employee
- GetPayrollDetailAsync: Returns detailed breakdown of a specific payslip

3.3 Payroll Components

Earnings Components:

- Basic Pay: Base salary component
- HRA (House Rent Allowance): Housing benefit (India-specific)
- Allowances: Additional benefits (transport, meal, etc.)
- Gross Pay: Total earnings before deductions

Deduction Components:

- PF (Provident Fund): Retirement savings (India-specific)
- Income Tax: Federal/State tax withholding
- ESI (Employee State Insurance): Health insurance (India-specific)
- Total Deductions: Sum of all deductions
- Net Pay: Take-home salary (Gross Pay - Deductions)

WorkFlow Global HRMS - Part 7: Payroll Module

4. Localized Payroll Logic

4.1 India Payroll Components

Indian payroll includes specific statutory components:

- Basic Pay: Typically 40-50% of CTC
- HRA: 40-50% of Basic Pay (tax-exempt up to limits)
- Special Allowance: Remaining salary components
- PF Deduction: 12% of Basic Pay (employee contribution)
- ESI: 0.75% of gross (if salary < Rs. 21,000/month)
- Professional Tax: State-specific (Rs. 200-2,500/year)
- Income Tax: As per IT Act slabs with deductions

4.2 US Payroll Components

US payroll includes different statutory components:

- Base Salary: Annual salary divided by pay periods
- Overtime Pay: 1.5x hourly rate for hours > 40/week
- Federal Income Tax: Based on W-4 withholding
- State Income Tax: State-specific rates
- Social Security: 6.2% up to wage base limit
- Medicare: 1.45% of all wages
- Health Insurance Premium: Employee contribution
- 401(k) Contribution: Pre-tax retirement savings

4.3 Tax Calculation Examples

India Tax Calculation (FY 2024-25):

Income Slabs (New Regime):

Up to Rs. 3,00,000: Nil

Rs. 3,00,001 - Rs. 6,00,000: 5%

Rs. 6,00,001 - Rs. 9,00,000: 10%

Rs. 9,00,001 - Rs. 12,00,000: 15%

Rs. 12,00,001 - Rs. 15,00,000: 20%

Above Rs. 15,00,000: 30%

Example: Annual Salary Rs. 12,00,000

Tax = 0 + 15,000 + 30,000 + 45,000 = Rs. 90,000/year

Monthly Tax = Rs. 7,500

US Tax Calculation (2024):

Federal Tax Brackets (Single Filer):

\$0 - \$11,000: 10%

\$11,001 - \$44,725: 12%

\$44,726 - \$95,375: 22%

\$95,376 - \$182,100: 24%

WorkFlow Global HRMS - Part 7: Payroll Module

Generated: June 23, 2026

Example: Annual Salary \$80,000

Tax = 1,100 + 4,047 + 7,843 = \$12,990/year

Monthly Tax = \$1,082.50

5. GraphQL API Layer

5.1 Queries

getMyPayslips:

```
[GraphQLName("getMyPayslips")]
public async Task<IEnumerable<PayrollRecordDto>> GetMyPayslipsAsync(
    [Service] IPayrollService payrollService,
    string employeeId)
{
    return await payrollService.GetMyPayslipsAsync(employeeId);
}
```

getPayrollDetail:

```
[GraphQLName("getPayrollDetail")]
public async Task<PayrollRecordDto?> GetPayrollDetailAsync(
    [Service] IPayrollService payrollService,
    string payslipId)
{
    return await payrollService.GetPayrollDetailAsync(payslipId);
}
```

WorkFlow Global HRMS - Part 7: Payroll Module

6. Frontend Implementation

6.1 Payroll Dashboard

The Payroll Dashboard (/payroll) provides:

- Payslip List: Display all payslips ordered by pay period
- Pay Period: Show month and year for each payslip
- Net Pay: Highlight take-home salary
- Status Badge: Draft, Processed, or Paid
- View Details: Button to see full breakdown

6.2 Payslip Detail View

Detailed payslip breakdown includes:

- Employee Information: Name, ID, Department
- Pay Period: Start and end dates
- Earnings Section: Basic Pay, HRA, Allowances, Gross Pay
- Deductions Section: PF, ESI, Income Tax, Total Deductions
- Net Pay: Final take-home amount
- Download Button: Export payslip as PDF

6.3 Localized Display

UI adapts based on employee country:

- India: Shows PF, ESI, Professional Tax, HRA
- US: Shows Federal Tax, State Tax, Social Security, Medicare, 401(k)
- Currency: Displays in local currency (INR/USD)
- Date Format: Follows regional conventions

6.4 GraphQL Integration

Frontend GraphQL queries:

```
export const GET_MY_PAYSLIPS = gql`
  query GetMyPayslips($employeeId: String!) {
    getMyPayslips(employeeId: $employeeId) {
      id
      payPeriodStart
      payPeriodEnd
      basicPay
      hra
      allowances
      grossPay
      pf
      incomeTax
      esi
      deductions
      netPay
    }
  }
`
```

WorkFlow Global HRMS - Part 7: Payroll Module

Generated: June 23, 2026

```
    status
  }
}
;
```

WorkFlow Global HRMS - Part 7: Payroll Module

7. Database Configuration

7.1 Entity Configuration

PayrollRecord entity configuration:

- Table name: PayrollRecords
- Primary key: Id (string)
- Foreign key: EmployeeId references Employees table
- Indexes: Created on EmployeeId, PayPeriodStart, Status
- Decimal precision: 18,2 for all monetary fields

7.2 Sample Data Structure

PayrollRecord Example (India):

```
{
  "employeeId": "EMP001",
  "payPeriodStart": "2024-01-01",
  "payPeriodEnd": "2024-01-31",
  "basicPay": 50000.00,
  "hra": 20000.00,
  "allowances": 10000.00,
  "grossPay": 80000.00,
  "pf": 6000.00,
  "incomeTax": 5000.00,
  "esi": 600.00,
  "deductions": 11600.00,
  "netPay": 68400.00,
  "status": "Paid"
}
```

WorkFlow Global HRMS - Part 7: Payroll Module

Generated: June 23, 2026

8. Business Logic & Calculations

8.1 Gross Pay Calculation

Gross Pay = Basic Pay + HRA + Allowances + Bonuses + Overtime

8.2 Net Pay Calculation

Net Pay = Gross Pay - Total Deductions

Total Deductions = PF + ESI + Income Tax + Professional Tax + Other Deductions

8.3 Payroll Processing Flow

- 1. HR initiates payroll for pay period
- 2. System calculates gross pay for each employee
- 3. Apply statutory deductions based on country
- 4. Calculate income tax based on salary slabs
- 5. Compute net pay
- 6. Generate payslip records with Status = Draft
- 7. HR reviews and approves (Status = Processed)
- 8. Finance processes payment (Status = Paid)

9. Technical Interview Questions

9.1 Architecture Questions

Q1: Why is payroll read-only for employees?

A: Payroll data is sensitive and should only be modified by authorized HR/Finance personnel. Employees can view their payslips but cannot edit them. This ensures data integrity and compliance with financial regulations.

Q2: How would you handle payroll corrections?

A: Implement a PayrollAdjustment entity to track corrections. Create a new payslip with adjusted values and link to original. Maintain audit trail of who made changes and why. Never delete original records for compliance.

9.2 Localization Questions

Q3: How would you add support for a new country?

A: 1) Add country-specific tax calculation service, 2) Define statutory components in configuration, 3) Create country-specific payslip template, 4) Add validation rules, 5) Update UI to show relevant components.

Q4: How do you handle mid-year tax law changes?

A: Version tax calculation rules with effective dates. Store rule version with each payslip. When recalculating historical payslips, use rules effective for that period. Maintain tax rule history table.

9.3 Performance Questions

Q5: How would you optimize bulk payroll generation?

A: 1) Use batch processing with parallel execution, 2) Cache employee data, 3) Pre-calculate tax brackets, 4) Use bulk insert for payslip records, 5) Implement progress tracking, 6) Queue-based processing for large organizations.

Q6: How would you handle payroll for 10,000+ employees?

A: 1) Partition payroll data by department/location, 2) Use distributed processing, 3) Implement incremental processing, 4) Cache frequently accessed data, 5) Use read replicas for reporting, 6) Archive old payroll data.

10. Security Considerations

10.1 Data Privacy

Payroll data protection:

- Employees can only view their own payslips
- Managers cannot view team member salaries (unless HR role)
- Encrypt sensitive fields (salary, tax details) at rest
- Mask partial salary in logs and audit trails
- Implement field-level access control

10.2 Compliance

Regulatory compliance:

- Maintain payroll records for statutory period (7 years)
- Generate tax forms (Form 16 in India, W-2 in US)
- Support tax audits with detailed breakdowns
- Comply with data protection laws (GDPR, local laws)

10.3 Audit Trail

Track all payroll operations:

- Who generated payroll and when
- Who approved payroll for processing
- Who marked payroll as paid
- Any corrections or adjustments made
- Payslip access logs (who viewed which payslip)

WorkFlow Global HRMS - Part 7: Payroll Module

11. Future Enhancements

11.1 Advanced Features

- Variable pay: Bonuses, incentives, commissions
- Arrears calculation: Backpay for salary revisions
- Loan deductions: EMI deductions from salary
- Advance salary: Track and deduct advances
- Reimbursement integration: Add approved expenses to payroll

11.2 Tax Optimization

- Tax planning: Suggest tax-saving investments
- Flexible benefits: Allow employees to choose tax-saving options
- Tax declaration: Collect investment proofs
- Form 16 generation: Auto-generate tax certificates

11.3 Reporting

- Payroll summary reports: Department-wise, location-wise
- Cost center allocation: Distribute payroll costs
- Statutory reports: PF, ESI, PT returns
- Year-end reports: Annual salary statements

11.4 Integration

- Bank integration: Direct salary credit via API
- Accounting integration: Post payroll to general ledger
- Attendance integration: Calculate pay based on attendance
- Leave integration: Deduct for unpaid leave

WorkFlow Global HRMS - Part 7: Payroll Module

12. Conclusion

Part 7 successfully implements a comprehensive Payroll Module for the WorkFlow Global HRMS system. The implementation provides employees with transparent access to their salary information while maintaining strict security and compliance standards.

Key achievements include:

- Localized payroll support for India and US
- Detailed earnings and deductions breakdown
- Country-specific tax calculations
- Secure, read-only access for employees
- GraphQL API for payslip retrieval
- Comprehensive audit trail
- Scalable architecture for multi-country support

The module is production-ready and can be extended with additional features such as variable pay, tax optimization, advanced reporting, and integration with banking and accounting systems.
