

WorkFlow Global HRMS - Performance Module

Generated: 2026-06-23 15:31:20

1. Performance Management Module Overview

The Performance Management module enables organizations to track employee goals, manage OKRs (Objectives and Key Results), and conduct performance reviews. It provides a comprehensive system for setting objectives, monitoring progress, and evaluating employee performance.

Key Features:

- Goal and OKR tracking with progress monitoring
- Performance review management with ratings and feedback
- Real-time progress updates and status tracking
- Manager dashboard for team goal oversight
- Automated status updates based on progress and deadlines

2. Backend Architecture

2.1 Domain Entities

Goal Entity:

```
public class Goal : BaseEntity
{
    public string EmployeeId { get; set; }
    public string Title { get; set; }
    public decimal TargetValue { get; set; }
    public decimal CurrentValue { get; set; }
    public decimal Weight { get; set; }
    public GoalStatus Status { get; set; }
    public decimal ProgressPercentage { get; set; }
    public DateTime? DueDate { get; set; }
}
```

PerformanceReview Entity:

```
public class PerformanceReview : BaseEntity
{
    public string EmployeeId { get; set; }
    public string ReviewerId { get; set; }
    public string Period { get; set; }
    public decimal Rating { get; set; }
    public string? Strengths { get; set; }
    public string? Improvements { get; set; }
    public DateTime? ReviewDate { get; set; }
}
```

2.2 Goal Status Enum

```
public enum GoalStatus
{
    NotStarted,
    InProgress,
    Completed,
    Overdue
}
```

2.3 Service Layer

The PerformanceService implements the following operations:

- GetMyGoalsAsync: Retrieve employee goals
- GetTeamGoalsAsync: Monitor team goals for managers
- UpdateGoalProgressAsync: Update goal completion values
- GetMyReviewsAsync: Fetch performance reviews

Progress Calculation Logic:

```
// Calculate progress percentage
if (goal.TargetValue > 0)
{
    goal.ProgressPercentage =
        Math.Min(100, (currentValue / goal.TargetValue) * 100);
}

// Update status based on progress
if (goal.ProgressPercentage >= 100)
    goal.Status = GoalStatus.Completed;
else if (goal.ProgressPercentage > 0)
    goal.Status = GoalStatus.InProgress;

// Check if overdue
if (goal.DueDate.HasValue &&
    goal.DueDate.Value < DateTime.UtcNow &&
    goal.Status != GoalStatus.Completed)
{
    goal.Status = GoalStatus.Overdue;
}
```

3. GraphQL API

3.1 Queries

getMyGoals Query:

```
query GetMyGoals($employeeId: String!) {  
  getMyGoals(employeeId: $employeeId) {  
    id  
    title  
    targetValue  
    currentValue  
    progressPercentage  
    status  
    dueDate  
  }  
}
```

getTeamGoals Query:

```
query GetTeamGoals($managerId: String!) {  
  getTeamGoals(managerId: $managerId) {  
    id  
    employeeId  
    employeeName  
    title  
    progressPercentage  
    status  
  }  
}
```

3.2 Mutations

updateGoalProgress Mutation:

```
mutation UpdateGoalProgress(  
  $goalId: String!  
  $currentValue: Decimal!  
) {  
  updateGoalProgress(  
    goalId: $goalId  
    currentValue: $currentValue  
  ) {  
    id  
    currentValue  
    progressPercentage  
    status  
  }  
}
```

4. Frontend Implementation

4.1 Performance Dashboard

The performance dashboard displays employee goals with visual progress bars, status indicators, and action buttons for updating progress.

Key UI Components:

- Goal cards with progress visualization
- Status badges (Not Started, In Progress, Completed, Overdue)
- Update progress modal with validation
- Performance review display with ratings
- Strengths and improvement areas sections

4.2 Progress Update Flow

User Interaction Flow:

1. User clicks "Update Progress" on a goal card
2. Modal opens with current value pre-filled
3. User enters new current value
4. System validates input against target value
5. GraphQL mutation updates goal progress
6. Progress bar and status update automatically

5. Business Logic & Rules

5.1 Goal Progress Rules

- Progress percentage is calculated as $(\text{current} / \text{target}) * 100$
- Progress is capped at 100% maximum
- Status automatically changes to "Completed" at 100%
- Status changes to "Overdue" if past due date and not completed
- Goals can have weighted importance for overall performance scoring

5.2 Performance Review Rules

- Reviews are conducted by designated reviewers (managers)
- Rating scale: 0.0 to 5.0
- Reviews include qualitative feedback (strengths/improvements)
- Reviews are tied to specific time periods (Q1, Q2, Annual, etc.)
- Historical reviews are maintained for trend analysis

6. Data Flow Diagrams

6.1 Goal Update Flow

1. Frontend: User initiates goal progress update
2. GraphQL: updateGoalProgress mutation called
3. Service: PerformanceService.UpdateGoalProgressAsync
4. Repository: Fetch goal from database
5. Business Logic: Calculate new progress percentage
6. Business Logic: Update status based on progress and due date
7. Repository: Persist updated goal
8. Response: Return updated goal DTO to frontend

6.2 Team Goals Monitoring Flow

1. Manager accesses team goals dashboard
2. GraphQL: getTeamGoals query with managerId
3. Service: Retrieve all team member goals
4. Repository: Query goals with filtering
5. Response: Return aggregated team goal data

7. Integration Points

7.1 Employee Module Integration

Goals are linked to employees via EmployeeId. In production, employee names and details would be fetched from the Employee service for display purposes.

7.2 Notification Integration

The system can trigger notifications for:

- Goal approaching due date
- Goal marked as overdue
- Performance review scheduled
- Performance review completed

8. Security & Permissions

8.1 Access Control

- Employees can view and update their own goals
- Managers can view team member goals
- Only designated reviewers can create/edit performance reviews
- HR admins have full access to all performance data

8.2 Data Privacy

- Performance reviews are confidential
- Goal data is restricted to employee and their management chain
- Audit trails maintained for all goal and review changes

9. Future Enhancements

- 360-degree feedback system
- Automated goal suggestions based on role and department
- Performance analytics and trend visualization
- Integration with learning & development recommendations
- Peer recognition and kudos system
- Competency framework mapping
- Succession planning integration
- Performance improvement plan (PIP) tracking

10. Conclusion

The Performance Management module provides a robust foundation for tracking employee goals and conducting performance reviews. The modular architecture allows for easy extension and integration with other HRMS modules. The GraphQL API provides flexible data access, while the React frontend delivers an intuitive user experience for both employees and managers.
