AI HR Copilot Module

The AI HR Copilot is an intelligent assistant that helps employees get instant answers to HR-related questions. It provides context-aware responses about policies, benefits, leave, goals, and more through a conversational interface.

Key Features:

- Natural language query processing
- Context-aware responses
- Suggested follow-up questions
- Conversation history
- Quick query buttons
- Feedback mechanism
- 24/7 availability

Backend Implementation

Domain Entities:

```
public class CopilotResponse
{
    public string Query { get; set; }
    public string Response { get; set; }
    public List<string> SuggestedQuestions { get; set; }
    public DateTime Timestamp { get; set; }
}

public class CopilotInteraction : BaseEntity
{
    public string EmployeeId { get; set; }
    public string Query { get; set; }
    public string Response { get; set; }
    public DateTime InteractionTime { get; set; }
    public string? Context { get; set; }
    public bool? WasHelpful { get; set; }
}
```

Supported Topics:

- Leave policies (LWP, sick leave, vacation)
- Benefits and insurance
- Performance goals and reviews
- Expense reimbursements
- Company policies
- HR procedures

GraphQL API:

Mutations:

- askHrCopilot: Returns AI response with suggestions

Frontend Implementation

Copilot Panel Component:

- Slide-out panel from bottom/side
- Quick HR query buttons
- Text input for custom questions
- Suggested follow-up questions
- Conversation history
- Helpful/Not helpful feedback
- Accessible via bottom navigation

AI Simulation

Current implementation uses rule-based responses:

- Pattern matching on keywords
- Pre-defined response templates
- Context-specific suggestions
- Can be replaced with actual AI/LLM integration

Future Enhancements

- Integration with OpenAI/Azure OpenAI
- Multi-language support
- Voice interface
- Document search integration
- Personalized responses
- Learning from feedback
- Advanced NLP capabilities
