

WorkFlow Global HRMS - Onboarding Module

Generated: 2026-06-23 16:41:40

1. Onboarding Module Overview

The Onboarding Module streamlines the new hire onboarding process by providing automated task checklists, progress tracking, and HR admin oversight. It ensures consistent onboarding experiences across the organization while allowing HR teams to monitor completion rates and identify bottlenecks.

Key Features:

- Automated onboarding checklist generation based on role
- Interactive task completion with progress tracking
- Circular progress visualization for new hires
- HR admin dashboard for monitoring all onboarding activities
- Department and status-based filtering
- Real-time progress updates

2. Backend Architecture

2.1 Domain Entities

OnboardingChecklist Entity:

```
public class OnboardingChecklist : BaseEntity
{
    public string EmployeeId { get; set; }
    public string TaskId { get; set; }
    public string TaskName { get; set; }
    public string Description { get; set; }
    public OnboardingTaskStatus Status { get; set; }
    public DateTime? CompletedAt { get; set; }
    public DateTime CreatedAt { get; set; }
}
```

OnboardingTemplate Entity:

```
public class OnboardingTemplate : BaseEntity
{
    public string Role { get; set; }
    public string TasksJson { get; set; }
    public DateTime CreatedAt { get; set; }
}
```

2.2 Task Status Enum

```
public enum OnboardingTaskStatus
{
    Pending = 0,
    Completed = 1
}
```

2.3 Service Layer

The OnboardingService implements the following operations:

- CreateOnboardingChecklistAsync: Generate role-based task checklist
- ToggleOnboardingTaskAsync: Mark tasks as complete/incomplete
- GetNewHireChecklistAsync: Retrieve employee checklist
- GetOnboardingProgressSummaryAsync: Get all employees progress

Role-Based Task Generation:

```
// Default tasks for all roles
- Submit ID Documents
- Complete IT Setup
- Watch Compliance Video
- Meet Your Manager
- Complete HR Paperwork
- Review Company Handbook

// Additional tasks for Engineers
- Setup Development Environment
- Complete Security Training

// Additional tasks for Managers
- Leadership Training
- Meet Your Team
```

3. GraphQL API

3.1 Queries

getNewHireChecklist Query:

```
query GetNewHireChecklist($employeeId: String!) {  
  getNewHireChecklist(employeeId: $employeeId) {  
    id  
    taskName  
    description  
    status  
    completedAt  
  }  
}
```

getOnboardingProgressSummary Query:

```
query GetOnboardingProgressSummary {  
  getOnboardingProgressSummary {  
    employeeId  
    employeeName  
    department  
    totalTasks  
    completedTasks  
    progressPercentage  
    startDate  
  }  
}
```

3.2 Mutations

createOnboardingChecklist Mutation:

```
mutation CreateOnboardingChecklist(  
  $employeeId: String!  
  $role: String!  
) {  
  createOnboardingChecklist(  
    employeeId: $employeeId  
    role: $role  
  ) {  
    id  
    taskName  
    status  
  }  
}
```

toggleOnboardingTask Mutation:

```
mutation ToggleOnboardingTask(  
  $checklistId: String!  
  $isCompleted: Boolean!
```

```
) {  
  toggleOnboardingTask(  
    checklistId: $checklistId  
    isCompleted: $isCompleted  
  ) {  
    id  
    status  
    completedAt  
  }  
}
```

4. Frontend Implementation

4.1 New Hire Dashboard (/onboarding)

The new hire dashboard provides an engaging, interactive onboarding experience with visual progress tracking and easy task completion.

Key UI Components:

- Circular progress ring showing completion percentage
- Linear progress bar for quick visual reference
- Interactive task cards with click-to-complete functionality
- Completion celebration message when all tasks are done
- Task descriptions and completion timestamps
- Gradient background for modern aesthetic

4.2 HR Admin Tracker (/onboarding/tracker)

The HR admin tracker provides comprehensive oversight of all onboarding activities across the organization with powerful filtering and search capabilities.

Dashboard Features:

- Summary cards: Total new hires, completed, in-progress, avg progress
- Search by employee name or department
- Filter by status: All, In Progress, Completed
- Detailed progress table with employee information
- Visual progress bars for each employee
- Status badges with color coding

5. Business Logic & Rules

5.1 Checklist Generation Rules

- Checklists are generated based on employee role
- All roles receive common onboarding tasks
- Role-specific tasks are added automatically
- Each task gets a unique TaskId for tracking
- Tasks are created in Pending status by default

5.2 Progress Calculation

- $\text{Progress} = (\text{Completed Tasks} / \text{Total Tasks}) * 100$
- Progress updates in real-time as tasks are completed
- Completion triggers visual celebration in UI
- CompletedAt timestamp recorded for audit trail

5.3 Admin Tracking Rules

- All new hires visible to HR admins
- Progress aggregated across departments
- Average progress calculated for organization insights
- Filtering and search for quick employee lookup

6. Data Flow Diagrams

6.1 Task Completion Flow

1. Frontend: User clicks task to toggle completion
2. GraphQL: toggleOnboardingTask mutation called
3. Service: OnboardingService.ToggleOnboardingTaskAsync
4. Repository: Fetch task from database
5. Business Logic: Update status and set CompletedAt timestamp
6. Repository: Persist updated task
7. Response: Return updated task to frontend
8. Frontend: Refetch checklist and update UI

6.2 Admin Dashboard Flow

1. HR admin accesses tracker page
2. GraphQL: getOnboardingProgressSummary query
3. Service: Aggregate all employee checklists

7. Integration Points

7.1 Employee Module Integration

Onboarding checklists are linked to employees via EmployeeId. In production, employee details (name, department, role) would be fetched from the Employee service for display and task generation.

7.2 Notification Integration

The system can trigger notifications for:

- New checklist created for employee
- Task completion reminders
- Onboarding completion celebration
- Manager alerts for delayed onboarding

8. Security & Permissions

- Employees can only view and update their own checklists
- HR admins can view all onboarding progress
- Managers can view their direct reports onboarding status
- Task completion audit trail maintained

9. Future Enhancements

- Custom task templates per department
- Automated task assignment with due dates
- Integration with calendar for scheduled tasks
- Document upload requirements for specific tasks
- Buddy system assignment
- Onboarding feedback surveys
- Analytics on average completion time
- Mobile app support

10. Conclusion

The Onboarding Module provides a comprehensive solution for streamlining new hire onboarding with automated task management, real-time progress tracking, and HR oversight capabilities. The modular architecture allows for easy extension and integration with other HRMS modules.
